

NIB Control360

Internal Control Findings Management System (ICFMS)

Document: Business Process & Workflow Specification

Version: 1.0

Scope: Bank-wide — 13 Districts and 410+ Branches

Status: Proposed Business Process

Document 3 — Business Process & Workflow Specification

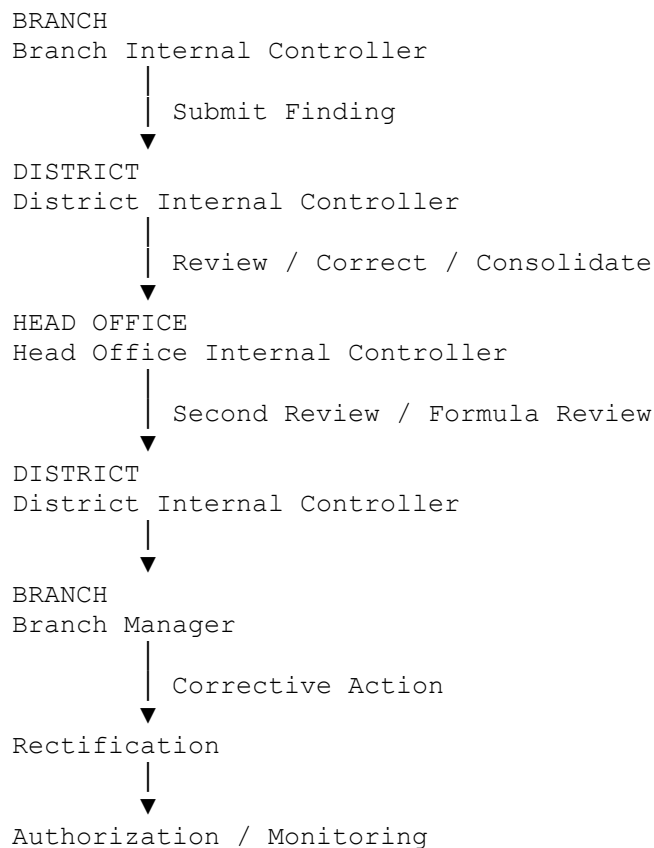

1. Purpose

This document defines the operational workflow of NIB Control360 from the creation of an Internal Control finding through review, approval, rectification, authorization, transfer, closure and performance reporting.

The objective is to ensure that the system reflects the Bank's existing business process while eliminating unnecessary manual Excel-based activities.

2. Organizational Workflow

The primary workflow is:

3. Finding Lifecycle

Each finding shall have a controlled status.

Proposed statuses

DRAFT
↓
SUBMITTED
↓
DISTRICT_REVIEW
↓
DISTRICT_APPROVED
↓
HEAD_OFFICE_REVIEW
↓
HEAD_OFFICE_APPROVED
↓
RECTIFICATION_PENDING
↓
PARTIALLY_RECTIFIED

RECTIFICATION_SUBMITTED
↓
AUTHORIZED
↓
CLOSED

Alternative paths:

DISTRICT_REVIEW
↓
RETURNED_FOR_CORRECTION
↓
BRANCH_CONTROLLER

or:

DISTRICT_REVIEW
↓
REJECTED

4. Branch Internal Controller Process

4.1 Create Finding

The Branch Internal Controller selects:

Findings → Register Finding

The system displays the finding registration form.

Required information

Finding Basic Information

- Finding Source
- Reporting Month
- District
- Branch
- Finding Date
- Operation Area
- Type of Irregularity
- Classified Case

Classified Case

Initially:

- ATM Mismatch
- ATM Long Outstanding
- IT Case
- Dormant Account
- Zero Balance
- CK Book
- Other Case

Risk & Financial Information

- Amount Involved
- Currency
- Number of Cases
- Risk Level
- Description
- Recommendation
- Evidence

Recommendation is optional.

Evidence upload is optional.

5. Save Draft

If the controller is not ready to submit:

Save as Draft

The finding receives:

```
Status = DRAFT
```

The controller can later:

- Edit
- Complete
- Save again
- Submit

A draft is not included in official reporting until submitted according to the approved business rules.

6. Submit Finding

When complete:

Submit Finding

The system validates required fields.

If validation passes:

```
DRAFT
↓
SUBMITTED
↓
DISTRICT REVIEW
```

The District Internal Controller receives a notification.

7. District Internal Controller

The District Controller sees findings belonging to the District under their authorized scope.

The controller can:

Approve

Moves the finding to:

HEAD OFFICE REVIEW

Reject

Moves the finding to:

REJECTED

The rejection reason must be recorded.

Return for Correction

Moves the finding back:

DISTRICT

↓

BRANCH CONTROLLER

The controller must provide a comment/reason.

Comment

The controller can add a comment.

Users may reply through a threaded conversation.

8. District Consolidation

The District Internal Controller is responsible for reviewing the findings submitted by branches within the District.

The District dashboard should provide:

- Total submitted findings
- Findings requiring review
- Approved findings

- Rejected findings
- Returned findings
- Outstanding findings
- Transferred findings
- Branch performance
- District performance
- Monthly trend

The controller should be able to view branch-level details while maintaining the District-level aggregate.

9. Head Office Internal Controller

Once approved at District level, the finding proceeds to the Head Office Internal Controller.

The HO Controller performs the second-level review.

The HO Controller can:

- Review
- Comment
- Adjust according to approved business rules
- Approve
- Return for correction

If approved:

```
HEAD OFFICE APPROVED
      ↓
BRANCH MANAGER
      ↓
RECTIFICATION
```

If returned:

```
HEAD OFFICE
      ↓
DISTRICT
      ↓
BRANCH CONTROLLER
```

The return must preserve the complete history.

10. Branch Manager Process

After Head Office approval, the finding becomes available to the Branch Manager.

Dashboard section:

Pending Rectification

The manager can view:

- Finding
- Category
- Number of cases
- Amount involved
- Risk
- Recommendation
- Comments
- Supporting evidence
- Previous history

11. Rectification

The Branch Manager records corrective action.

The system must support both:

Full Rectification

Example:

Original Cases:	3
Original Amount:	ETB 45,000

Rectified Cases:	3
Rectified Amount:	ETB 45,000

Outstanding Cases:	0
Outstanding Amount:	ETB 0

Status:

RECTIFIED

Partial Rectification

Example:

Original:
3 cases
ETB 45,000

Rectified:
1 case
ETB 10,000

Remaining:
2 cases
ETB 35,000

Status:

PARTIALLY_RECTIFIED

The outstanding portion remains active.

12. Partial Rectification Rule

This is an important requirement for the development team.

A finding may represent multiple similar cases.

For example:

Case	Amount
Case 1	15,000
Case 2	10,000
Case 3	20,000
Total	45,000

The Branch Manager may rectify only Case 2.

The system must record:

Original Cases = 3

Original Amount = 45,000

Rectified Cases = 1

Rectified Amount = 10,000

Outstanding Cases = 2

Outstanding Amount = 35,000

The outstanding portion remains available for future rectification.

13. Authorization

After rectification, the appropriate authorization process is initiated.

The authorization stage should show:

- Original finding
- Original amount
- Original cases
- Rectified cases
- Rectified amount
- Outstanding cases
- Outstanding amount
- Evidence
- Corrective action
- Comments
- History

If the rectification is accepted:

AUTHORIZED

If not:

RETURNED

The exact authorization authority should be finalized with the business owner and IT during detailed requirements validation.

14. Transferred Case Process

An outstanding case should not simply disappear when a reporting month closes.

Example:

January
Finding
3 Cases
45,000
↓
1 Case Rectified
10,000
↓
2 Cases Outstanding
35,000
↓
February
Transferred
↓
March
Transferred

The system must maintain the relationship between the original finding and the continuing outstanding cases.

15. Transfer Data

For each transfer, maintain:

- Original Finding ID
 - Previous Reporting Month
 - New Reporting Month
 - Original Amount
 - Outstanding Amount
 - Original Case Count
 - Outstanding Case Count
 - Transfer Date
 - Transferred By
 - Transfer Reason
 - Case Age
 - Transfer History
-

16. Important Transfer Rule

A transferred case should not be treated as a completely new finding for performance purposes.

The system should distinguish:

New Case

from

Continuing / Transferred Case

This prevents repeated reporting from artificially inflating performance statistics.

17. Finding Sources

The system should support at least:

- Internal Control
- Internal Audit

The Finding Source should be stored against each finding.

This allows management to view:

Internal Control

and

Internal Audit

separately or together.

18. IC vs IA Dashboard

Management should be able to compare:

Metric	Internal Control	Internal Audit
Total Cases		
Other Cases		
Rectified		
Outstanding		
Amount		

Metric	Internal Control	Internal Audit
Rectified Amount		

The combined view can then provide a total picture.

19. Performance Workflow

The system should separate:

General Finding Statistics

from

Performance Scoring

All categories must remain visible for management and operational reporting.

However, the current performance methodology primarily evaluates **Other Case**.

The scoring engine must therefore be configurable.

20. Performance Calculation

Current primary performance measure:

$$\begin{aligned} \text{Performance \%} &= \\ &= \frac{\text{Rectified Eligible Cases}}{\text{Total Eligible Cases}} \\ &\times 100 \end{aligned}$$

Where the current eligible category is:

Other Case

The system should allow future categories to be enabled through Administration.

21. Performance Configuration

Only authorized **System Administrators** should modify scoring configuration.

Example:

Performance / Scoring Rules

- ☒ Other Case
- ☐ ATM Mismatch
- ☐ ATM Long Outstanding
- ☐ IT Case
- ☐ Dormant Account
- ☐ Zero Balance
- ☐ CK Book

Future changes can therefore be made without changing the core application.

22. Dashboard Workflow

Every user should receive a dashboard appropriate to their role and organizational scope.

Branch

Shows assigned branch.

District

Shows District aggregate plus branch drill-down.

Head Office

Shows bank-wide authorized information.

Administrator

Shows system-wide management information.

23. Dashboard Filters

The dashboard should provide filters such as:

- Reporting Month
- District
- Branch
- Finding Source
- Category
- Risk Level
- Status
- Search

Filters must respect user authorization.

For example:

A Branch Controller must not be able to select another branch and expose its data.

24. Branch Dashboard

The Branch Dashboard should show:

KPI Cards

- Total Findings
- Outstanding
- Rectified
- Transferred
- High Risk
- Performance

Category Summary

- ATM Mismatch
- ATM Long Outstanding
- IT Case
- Dormant
- Zero Balance
- CK Book
- Other Case

For each:

- Total cases

- Rectified cases
- Outstanding cases
- Amount
- Rectified amount
- Outstanding amount

Analytics

- Monthly trend
- Risk distribution
- Category distribution
- Recent activities
- Recent findings
- Notifications

25. District Dashboard

District Director and District Internal Controller dashboards follow the same general structure but aggregate data from all branches within the District.

The dashboard should provide:

District Total

and allow drill-down to:

Individual Branch

It should include:

- District performance
- Branch performance
- Top performers
- Bottom performers
- Monthly trend
- Risk distribution
- Category distribution
- Outstanding findings
- Transferred findings
- Rectification progress

26. Head Office Dashboard

Head Office should provide a bank-wide view.

It should support:

- District comparison
 - Branch comparison
 - Monthly performance
 - District ranking
 - Top-performing branches
 - Outstanding findings
 - High-risk findings
 - Transferred cases
 - Rectification progress
 - IC vs IA comparison
-

27. Administration Workflow

The Administrator should manage:

Users

- Create
- Edit
- Activate
- Deactivate
- Assign role
- Assign District
- Assign Branch

Organizational Units

- Districts
- Branches

Configuration

- Finding sources
- Categories
- Scoring rules
- Risk levels

- Reporting periods

28. Reporting Period Workflow

Authorized District and HO controllers should be able to control reporting periods according to their assigned authority.

Example:

```
Reporting Period
    ↓
OPEN
    ↓
REPORTING
    ↓
REVIEW
    ↓
LOCKED
```

A locked period should prevent unauthorized modification.

Any exceptional modification should be logged.

29. Communication Workflow

Every finding should contain a communication area.

Example:

```
District Controller:
Please correct the classification.
```

```
Branch Controller:
Correction completed.
```

```
District Controller:
Reviewed and approved.
```

Users should be able to:

- Comment
- Reply
- Attach documents

- View conversation history

30. Notification Workflow

Examples:

New Finding

Branch Controller
↓
District Controller

District Approval

District Controller
↓
Head Office Controller

HO Approval

Head Office
↓
Branch Manager

Return

HO
↓
District
↓
Branch Controller

Rectification Reminder

System
↓
Branch Manager

31. Audit Trail Workflow

Every significant action should generate an audit event.

Example:

Finding Created
↓
Submitted
↓
District Reviewed
↓
Approved
↓
HO Reviewed
↓
Approved
↓
Rectification Started
↓
Partially Rectified
↓
Authorized
↓
Closed

Each event should record:

- User
- Role
- Action
- Date
- Time
- Previous status
- New status
- Comment where applicable

32. Core Business Rules

BR-WF-001

A Branch Internal Controller can create findings only for their assigned Branch.

BR-WF-002

A Branch has one Branch Manager and one Branch Internal Controller.

BR-WF-003

A District may have multiple District Internal Controllers.

BR-WF-004

A user is assigned to only one Branch or District according to their role.

BR-WF-005

A submitted Branch finding must enter District review.

BR-WF-006

District approval sends the finding to Head Office review.

BR-WF-007

Head Office approval sends the finding to Branch Manager rectification.

BR-WF-008

Head Office return sends the finding through District back to Branch Controller for correction.

BR-WF-009

Partial rectification must be supported.

BR-WF-010

Outstanding cases can continue into subsequent reporting periods.

BR-WF-011

Transferred cases must retain their original history.

BR-WF-012

Transferred cases must not be treated as entirely new cases.

BR-WF-013

Performance scoring must be configurable.

BR-WF-014

Only authorized administrators may change scoring rules.

BR-WF-015

All users must see only information permitted by their organizational scope.

BR-WF-016

Reporting-period locking must prevent unauthorized changes.

BR-WF-017

Comments and replies must remain associated with the finding.

BR-WF-018

Attachments must be supported within the communication/finding workflow.

BR-WF-019

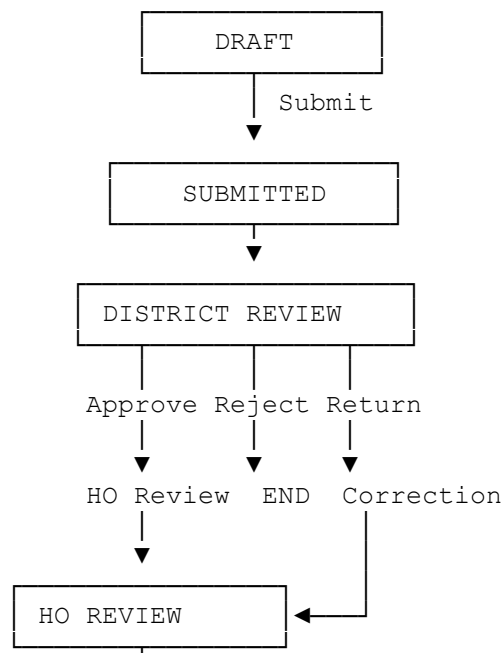

All major workflow actions must be auditable.

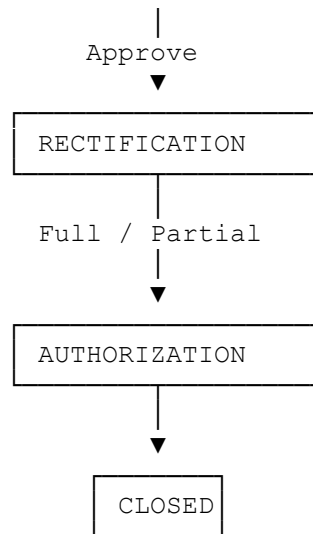

BR-WF-020

District dashboards must aggregate authorized branches while preserving branch-level drill-down.

33. High-Level State Machine

For IT implementation, the finding state model can be represented as:

34. Recommended Development Principle

The IT team should **not build the system around the current Excel files**.

Instead, Excel should be treated as the current-state process being replaced.

The new system should use structured entities such as:

User
Role
District
Branch
Finding
FindingCase
Rectification
Transfer
Comment
Attachment
Notification
ReportingPeriod
ScoringRule
AuditLog

This is particularly important because of your **partial rectification requirement**.

A finding containing three cases should not be permanently treated as one indivisible record. The production database should be capable of tracking the individual cases or case-level rectification events while still presenting the aggregated finding totals to users.
