BUSINESS REQUIREMENTS DOCUMENT (BRD)

Internal Control Findings Management System (ICFMS)

Organization: NIB International Bank

Business Owner: Internal Control Division

Document Version: 1.0

Status: Draft

Date: August 2026

1. Purpose

The purpose of this document is to define the business requirements for developing a centralized web-based Internal Control Findings Management System (ICFMS) to automate the complete lifecycle of Internal Control findings, including reporting, review, rectification, verification, performance measurement, notifications, and management reporting.

2. Business Need

The Internal Control Division currently depends on manual Excel-based reporting. This process results in:

- Repeated manual data entry
- Multiple file exchanges
- Version control problems
- Delayed reporting
- Increased operational risk
- Limited transparency
- High dependency on Excel formulas
- Difficulty monitoring outstanding findings
- No centralized repository
- Limited analytical capability

The proposed system will digitize and standardize the entire process.

3. Business Objectives

The system shall:

- Eliminate manual Excel consolidation.
 - Centralize all findings.
 - Automate workflows.
 - Automate performance calculations.
 - Improve monitoring and accountability.
 - Provide real-time dashboards.
 - Support historical analysis.
 - Improve operational efficiency.
 - Support future digital expansion.
-

4. Stakeholders

Primary Stakeholders

- Internal Control Division
- Branch Internal Controllers
- District Internal Controllers
- Head Office Internal Controllers
- Branch Managers
- District Directors

Supporting Stakeholders

- Information Technology support
- Information Security Team
- Digital Transformation Office
- Senior Management

External Future Stakeholder

- Internal Audit Department (future integration)
-

5. Current Business Process (AS-IS)

1. Branch Internal Controllers prepare monthly findings in Excel.
2. Reports are sent to District Internal Controllers.
3. Districts consolidate reports.
4. Reports are sent to Head Office Internal Controllers.
5. Performance calculations are performed manually using Excel formulas.

6. Results are returned to districts.
 7. Districts distribute reports to Branch Managers.
 8. Branch Managers implement corrective actions.
 9. Rectification reports are submitted.
 10. District Controllers verify the submissions.
 11. Final reports are sent to Head Office.
 12. Executive reports are prepared manually.
-

6. Future Business Process (TO-BE)

1. Branch Internal Controllers enter findings directly into the web system.
 2. District Controllers review submissions online.
 3. Head Office Internal Controllers monitor findings in real time.
 4. Branch Managers update rectification status in the system.
 5. Verification is completed digitally.
 6. Performance is calculated automatically.
 7. Dashboards update instantly.
 8. Reports are generated automatically.
 9. Notifications are sent automatically.
 10. Historical records remain permanently available.
-

7. User Roles

Administrator

Responsible for:

- User creation
 - Role assignment
 - Branch configuration
 - District configuration
 - Category maintenance
 - Workflow configuration
 - System settings
-

Branch Internal Controller

Can:

- Register findings
- Edit draft findings

- Submit findings
 - Verify rectifications (where physical verification is possible)
 - Upload optional evidence
 - View branch history
-

District Internal Controller

Can:

- Review branch submissions
 - Verify findings
 - Approve or return findings
 - Transfer outstanding cases
 - Monitor district performance
 - Generate district reports
-

Head Office Internal Controller

Can:

- Monitor all districts
 - Register Internal Audit findings received from the Internal Audit Department
 - Generate executive reports
 - Configure performance calculations
 - Monitor national performance
-

Branch Manager

Can:

- View assigned findings
 - Record corrective actions
 - Update rectification progress
 - Enter rectified case counts
 - Upload optional supporting evidence
 - Respond to comments
-

District Director

Can:

- View district dashboards

- Review branch performance
 - Review high-risk findings
 - Provide comments and recommendations
 - Cannot modify findings or scores
-

8. Functional Requirements

The system shall provide the following modules:

- User Management
 - Findings Management
 - Rectification Management
 - Verification
 - Case Transfer
 - Performance Calculation
 - Dashboards
 - Reports
 - Notifications
 - Audit Trail
 - Knowledge Base
 - Administration
-

9. Business Rules

Finding Source

The system shall support two finding sources:

- Internal Control
- Internal Audit

Internal Audit findings will initially be entered into the system by Head Office Internal Controllers until direct integration is implemented.

Performance Calculation

- Internal Control performance is initially calculated using findings classified as **Other Cases**.
- ATM, IT, Dormant, and Zero Balance findings shall be reported separately and stored for future inclusion in scoring.
- Internal Audit findings follow their own methodology.
- The District cumulative score combines Internal Control and Internal Audit results.

Case Transfer

If an outstanding finding continues into another reporting month:

- It shall be transferred to the new month.
- It shall no longer affect the original month's performance.
- The transferred month becomes responsible for the performance impact.
- The transfer history shall remain visible.

Evidence

Evidence upload is optional. Verification may rely on physical inspection, documentary evidence, or both.

Notifications

The system shall automatically notify relevant users when:

- A finding is submitted.
- A rectification is overdue.
- A verification is pending.
- A finding is returned.
- A case is transferred.
- A comment is added.

Outlook email integration shall be supported.

10. Non-Functional Requirements

The solution shall:

- Be web-based.
 - Support secure authentication.
 - Use role-based access control.
 - Maintain complete audit logs.
 - Be scalable.
 - Be configurable.
 - Support backup and recovery.
 - Deliver responsive performance.
 - Be compatible with modern browsers.
-

11. Success Criteria

The project will be successful when:

- Manual Excel consolidation is eliminated.
 - Users complete workflows entirely through the system.
 - Performance calculations are automatic.
 - Management dashboards are available in real time.
 - Reports are generated on demand.
 - Historical data is searchable and traceable.
-

12. Future Enhancements

The system architecture should support future additions such as:

- Direct Internal Audit integration
 - Mobile application
 - Power BI dashboards
 - Digital signatures
 - Workflow automation
 - AI-assisted analytics
 - OCR-based document processing
 - API integration with other bank systems
-

13. Approval

This document serves as the baseline business requirements for the development of the Internal Control Findings Management System and should be reviewed and approved by the Internal Control Division, IT Division, and the appropriate management authority before development begins.
